

## **SUMMARY OF PRODUCT CHARACTERISTICS**

### **1. NAME OF THE VETERINARY MEDICINAL PRODUCT**

Anthelmin Plus Flavour Tablets for dogs

### **2. QUALITATIVE AND QUANTITATIVE COMPOSITION**

Each tablet contains:

#### **Active substances:**

Praziquantel	50 mg
Pyrantel embonate	144 mg
Febantel	150 mg

#### **Excipients:**

<b>Qualitative composition of excipients and other constituents</b>
Lactose monohydrate
Maize starch
Povidone K-30
Sodium laurilsulfate
Microcrystalline cellulose (E460)
Colloidal anhydrous silica
Magnesium stearate (E572)
Meat flavour

Yellow coloured, round, biconvex tablets with visible darker spots, cross-scored on one side.

### **3. CLINICAL INFORMATION**

#### **3.1 Target species**

Dogs (weighing at least 2 kg).

#### **3.2 Indications for use for each target species**

For the treatment of mixed infections with the following roundworms and tapeworms in adult dogs and puppies:

Nematodes

Ascarids: *Toxocara canis*, *Toxascaris leonina* (late immature forms and mature forms)

Hookworms: *Uncinaria stenocephala*, *Ancylostoma caninum* (adults)

Cestodes

Tapeworms: *Taenia* spp., *Dipylidium caninum*

### 3.3 Contraindications

Do not use simultaneously with piperazine compounds.  
Do not exceed the stated dosage when treating pregnant bitches.  
Do not use in cases of hypersensitivity to the active substances or to any of the excipients. Do not use in dogs younger than 2 weeks of age and/or weighing less than 2 kg.

### 3.4 Special warnings

Fleas serve as intermediate hosts for one common type of tapeworm – *Dipylidium caninum*. Tapeworm infestation is certain to re-occur unless control of intermediate hosts such as fleas, mice etc. is undertaken.  
Parasite resistance to any particular class of anthelmintic may develop following frequent, repeated use of an anthelmintic of that class.

### 3.5 Special precautions for use

Special precautions for safe use in the target species:  
Any part-used tablets should be discarded.

Special precautions to be taken by the person administering the veterinary medicinal product to animals

In the interests of good hygiene, persons administering the tablet directly to a dog or by adding it to the dog's food, should wash their hands afterwards.  
In case of accidental ingestion, seek medical advice immediately and show the package leaflet or the label to the physician.

Special precautions for the protection of the environment:

Not applicable.

### 3.6 Adverse events

Dogs:

Very rare (<1 animal / 10,000 animals treated, including isolated reports):	Loose stool, diarrhoea, vomiting.*
--	------------------------------------

\*Transient.

Reporting adverse events is important. It allows continuous safety monitoring of a veterinary medicinal product. Reports should be sent, preferably via a veterinarian, to either the marketing authorisation holder or its local representative or the national competent authority via the national reporting system. See the package leaflet for respective contact details.

### **3.7 Use during pregnancy, lactation or lay**

#### Pregnancy:

Do not use in bitches during the first two-thirds of pregnancy.  
Consult a veterinary surgeon before treating pregnant animals for roundworms.

#### Lactation:

Can be used during lactation (see Sections 3.3 and 3.9).

### **3.8 Interaction with other medicinal products and other forms of interaction**

Do not combine with piperazine as the anthelmintic effects of pyrantel and piperazine (used in many worming products for dogs) may be antagonized.  
Concurrent use with other cholinergic compounds can lead to toxicity.

### **3.9 Administration routes and dosage**

For oral use.

#### Dosage

The recommended dose rates are: 15 mg/kg bodyweight febantel, 14.4 mg/kg pyrantel and 5 mg/kg praziquantel. This is equivalent to 1 tablet per 10 kg bodyweight. Tablets may be halved/quartered to allow accuracy of dosing.

#### Administration and Duration of Treatment

The tablet(s) can be given directly to the dog or disguised in food. No restriction of access to food is required either before or after administration of the veterinary medicinal product.

To ensure a correct dosage, body weight should be determined as accurately as possible. Puppies may be wormed with this veterinary medicinal product from 2 weeks of age and every 2 weeks until 12 weeks of age. Thereafter they should be treated at 3 monthly intervals until 6 months of age.

For the control of *Toxocara*, nursing bitches should be dosed 2 weeks after giving birth and every 2 weeks until weaning.

For adult dogs, a single dose should be used. The advice of a veterinarian should be sought regarding the need for and frequency of repeat treatment.

In the event of a heavy roundworm infestation, a repeat dose should be given after 14 days.

### **3.10 Symptoms of overdose (and where applicable, emergency procedures and antidotes)**

Benzimidazoles possess wide safety margin. Pyrantel is not absorbed systematically to any extent. Praziquantel also has a wide safety margin, of up to five times the recommended dose.

### **3.11 Special restrictions for use and special conditions for use, including restrictions on the use of antimicrobial and antiparasitic veterinary medicinal products in order to limit the risk of development of resistance**

Not applicable.

### **3.12 Withdrawal periods**

Not applicable.

## **4. PHARMACOLOGICAL INFORMATION**

### **4.1 ATCvet code: QP52AC55**

### **4.2 Pharmacodynamics**

The veterinary medicinal product contains anthelmintics active against roundworms and tapeworms. The veterinary medicinal product contains three active substances: febantel, pyrantel embonate (pamoate) and praziquantel, a partially hydrogenated pyrazino-isoquinoline derivative used widely as an anthelmintic for both human and veterinary use. Pyrantel acts as a cholinergic agonist. Its mode of action is to stimulate nicotinic cholinergic receptors of the parasite, induce spastic paralysis and thereby allow removal from the gastro-intestinal (GI) system by peristalsis.

With the mammalian system febantel undergoes ring closure forming fenbendazole and oxfendazole. It is these chemical entities which exert the anthelmintic effect by inhibition of tubulin polymerization. Formation of microtubules is thereby prevented, resulting in disruption to structures vital to the normal functioning of the helminth. Glucose uptake, in particular, is affected, leading to depletion in cell ATP. The parasite dies upon exhaustion of its energy reserves, which occurs 2 – 3 days later.

Praziquantel is very rapidly absorbed and distributed throughout the parasite. Both *in vitro* and *in vivo* studies have shown that praziquantel causes severe damage to the parasite integument, resulting in contraction and paralysis. There is an almost instantaneous tetanic contraction of the parasite musculature and a rapid vacuolisation of the syncytial tegument. This rapid contraction has been explained by changes in divalent cation fluxes, especially calcium.

In this fixed combination veterinary medicinal product pyrantel and febantel act synergistically against all relevant nematodes (ascarids and hookworms) in dogs. In particular, the activity spectrum covers *Toxocara canis*, *Toxascaris leonina*, *Uncinaria stenocephala* and *Ancylostoma caninum*. The spectrum of activity of praziquantel covers also cestode species in dogs, in particular all *Taenia* spp. and *Dipylidium caninum*. Praziquantel acts against adult and immature forms of these parasites.

### **4.3 Pharmacokinetics**

Perorally administered praziquantel is absorbed almost completely from the intestinal tract. After absorption, the drug is distributed to all organs. Praziquantel is metabolized into inactive forms in the liver and secreted in bile. It is excreted within 24 hours to more than 95% of the administered dosage. Only traces of non-metabolised praziquantel are excreted.

The pamoate salt of pyrantel has low aqueous solubility, an attribute that reduces absorption from the gut and allows the drug to reach and be effective against parasites in the large intestine. Because of the low systemic absorption of pyrantel pamoate, there is very little danger of adverse reactions/toxicity in the host. Following absorption, pyrantel pamoate is quickly and almost completely metabolised into inactive metabolites that are excreted rapidly in the urine.

Febantel is absorbed relatively rapidly and metabolised to a number of metabolites including fenbendazole and oxfendazole, which have anthelmintic activity.

## **5. PHARMACEUTICAL PARTICULARS**

### **5.1 Major incompatibilities**

Not applicable.

### **5.2 Shelf life**

Shelf-life of the veterinary medicinal product as packaged for sale: 3 years.

Shelf life of the divided tablets: use immediately.

Half/quarter tablets should be discarded.

### **5.3 Special precautions for storage**

This medicinal product does not require any special storage conditions.

### **5.4 Nature and composition of immediate packaging**

OPA/Al/PVC-Al blister: 2 tablets (1 blister with 2 tablets), in a box.

OPA/Al/PVC-Al blister: 4 tablets (2 blisters with 2 tablets), in a box.

OPA/Al/PVC-Al blister: 10 tablets (1 blister with 10 tablets), in a box.

OPA/Al/PVC-Al blister: 30 tablets (3 blisters with 10 tablets), in a box.

OPA/Al/PVC-Al blister: 50 tablets (5 blisters with 10 tablets), in a box.

OPA/Al/PVC-Al blister: 100 tablets (10 blisters with 10 tablets), in a box.

OPA/Al/PVC-Al blister: 300 tablets (30 blisters with 10 tablets), in a box.

Not all pack sizes may be marketed.

### **5.5 Special precautions for the disposal of unused veterinary medicinal products or waste materials derived from the use of such products**

Medicines should not be disposed of via wastewater or household waste.

Use take-back schemes for the disposal of any unused veterinary medicinal product or waste materials derived thereof in accordance with local requirements and with any national collection systems applicable to the veterinary medicinal product concerned.

## **6. NAME OF THE MARKETING AUTHORISATION HOLDER**

KRKA, d.d., Novo mesto

**7. MARKETING AUTHORISATION NUMBER**

Vm 01656/4015

**8. DATE OF FIRST AUTHORISATION**

04 March 2011

**9. DATE OF THE LAST REVISION OF THE SUMMARY OF THE  
PRODUCT CHARACTERISTICS**

February 2026

**10. CLASSIFICATION OF VETERINARY MEDICINAL PRODUCTS**

Veterinary medicinal product not subject to prescription.

Detailed information on this veterinary medicinal product is available in the Union Product Database (<https://medicines.health.europa.eu/veterinary>).
